

Amazon Sales Dashboard – Business Report

Project Overview

This dashboard project was created to analyse Amazon sales performance across different countries, regions, sales channels, product categories, and order priorities. The main goal of the dashboard was to help management understand business performance, identify profitable areas, detect weak-performing regions, and support data-driven decision making.

The dashboard was divided into two major sections:

- Revenue Analysis Dashboard
- Profit Analysis Dashboard

The analysis was performed using Tableau by creating KPIs, trend analysis, regional analysis, product analysis, and profitability analysis.

Business Problem

Amazon sales operations generate a huge amount of transactional data from multiple countries and product categories. However, management faced several business challenges:

- Difficulty tracking overall sales performance.
- No centralized view of revenue and profit.
- Lack of visibility into high-performing and low-performing countries.
- Difficulty understanding which product categories generate maximum profit.
- No clear understanding of sales trends over time.
- Challenges in evaluating sales channels and order priorities.
- Difficulty identifying areas where cost reduction is needed.

Objective of the Dashboard

The primary objectives of this dashboard were:

- Monitor total revenue, profit, cost, and units sold.
- Identify top-performing and low-performing countries.
- Analyse monthly and yearly sales trends.
- Compare performance between sales channels.
- Understand profitability by product category.
- Measure profit margin performance.
- Support management with data-driven insights.
- Improve operational and sales strategy

KPI Metrics Used in the Dashboard

The following key metrics were created and analysed:

Revenue KPIs

- Total Revenue
- Revenue Trend
- Revenue by Region
- Revenue by Item Type
- Revenue from Sales Channel
- Average Order Value
- Orders Per Year

Profit KPIs

- Total Profit
- Profit Margin
- Profit by Country
- Profit by Sales Channel
- Item-wise Profit
- Country-wise Profit Trend
- Monthly Profit Analysis
- Bottom 10 Countries by Profit

Analysis Performed

1. Revenue Analysis

What Was Analysed

- Total revenue generated by the business.
- Revenue contribution by regions.
- Revenue generated by product categories.
- Sales performance over time.
- Revenue contribution from online and offline channels.

Insights Found

- Certain regions contributed significantly more revenue than others.
- Some product categories generated very high sales volume.
- Revenue showed seasonal fluctuations across months.
- Online sales channels performed better in some regions.

Business Impact

This analysis helped management understand where the company earns most of its revenue and which areas require more business focus.

2. Profit Analysis

What Was Analysed

- Total profit generated.
- Profit contribution by countries.
- Monthly profit trend.
- Profit generated by each product category.
- Comparison of high-profit and low-profit markets.

Insights Found

- Some countries generated high revenue but low profit because of higher operational cost.
- Certain product categories had strong profit margins.
- A few countries continuously underperformed.
- Profit varied significantly month to month.

Business Impact

This helped identify profitable business areas and loss-making regions where corrective actions are required.

3. Sales Channel Analysis

What Was Analysed

- Online vs Offline sales performance.
- Revenue and profit generated through each channel.

Insights Found

- One sales channel generated higher revenue.
- Some channels showed stronger profit margins.
- Customer purchasing behaviour varied by region.

Business Impact

Management can now focus more investment on the most profitable sales channel.

4. Product Category Analysis

What Was Analysed

- Revenue by item type.
- Profit by item type.
- Product contribution to overall sales.

Insights Found

- Certain product categories consistently generated strong profit.
- Some high-revenue products had lower profit margins.
- Product performance differed across regions.

Business Impact

This analysis supports better inventory planning and product strategy.

5. Country and Regional Analysis

What Was Analysed

- Country-wise revenue and profit.
- Bottom 10 countries by performance.
- Regional sales distribution.

Insights Found

- Some countries were consistently underperforming.
- Specific regions dominated sales performance.
- Market potential varied across locations.

Business Impact

This helps management decide where to expand operations and where to optimize costs.

6. Time Series Trend Analysis

What Was Analysed

- Revenue trend over months.
- Monthly profit movement.
- Orders per year.

Insights Found

- Business performance fluctuated during certain periods.
- Some months showed peak sales activity.
- Growth patterns became visible over time.

Business Impact

The company can now forecast demand and plan seasonal business activities more effectively.

Key Findings from the Dashboard

Revenue Findings

- Revenue concentration was higher in selected regions.
- Product categories contributed differently to business growth.
- Sales trends indicated seasonal demand patterns.

Profit Findings

- High revenue does not always mean high profitability.
- Some countries produced negative or low margins.
- Profitability varied significantly by product category.

Operational Findings

- Order priorities impacted operational workload.
- Cost management is important in low-margin regions.

Business Recommendations

- Focus on High-Profit Regions
- Improve Performance in Low-Profit Countries
- Expand High-Margin Product Categories
- Reduce Cost in Low-Margin Areas
- Strengthen the Best Performing Sales Channel
- Use Forecasting for Seasonal Demand
- Monitor Dashboard Regularly
